Dr. Engelmann

Dear Sir

Please send me a copy of your "revision of the genus Juncus"; for which I inclose one doll. I would like very much to subscribe for a set of the Junci which I understand you intend to distribute

If I collect anything in this line which I think will interest you I will send them this fall

Yours truly

C. F. Parker

Dear Sir

In your note Aug 8/ you expressed a desire for anything of botanical interest I might have to send, I have therefore made up a package of such things as I thought would most interest you, and I send them with a good deal of diffidence I assure you and I hope you will correct all errors &c — I have enclosed in the package some of my fungi, which you will find marked with my name, I would esteem it a very great favor if you would name them for me if it is not too much trouble

Yours truly
C. F. Parker

Dr. G. Engelmann

Dear Sir

I have been so
busy the last fortnight that I have
not had time, to answer your
valuable and instructive letter
until to day

The J. dichotomus you speak of is
undoubtably from N. J. but I could
not say when or where I collected it
without seeing it, however on
looking my J. tenuis again I
found 4 specimen collected at
Lemisville, N. J. which looks
to me very much like the above
specie, I send three of them to you
also, J. scirpoides from Staten Island
Helenium microcephalum, Dr. Gray
says is H. quadridentatum, please
correct— Yours truly

Dr. Engelmann

Dear Sir

Last fall I sent you a package of Juncì to be named, you wrote me word that you would send them soon, not hearing from them since that time and supposing that in the hurry of professional duties, &c- you had forgotten them, I thought I would take the liberty of writing to you on the subject.

If I find anything interesting in the Juncus line, I will send you a package this fall if you wish them

Yours truly

C. F. Parker

Dr. Engelmann

Dear Sir

The package came all right, I have forwarded Mr. Austin's parcel to day. That spec.n of J. dichotomus you found mixed with J. tenuis, was coll.d at Dennisville, N.J. July 18/66 — I have found it this season very abundant in Burlington Co. N.J. I inclose a spec.n, if you want any I will be happy to send them. J. militaris, I will try and get for you it is in flower but the streams are so high they could not be got at very well at present, I generally find them growing in shallow water and extending to the borders of deep running streams, I have not noticed them in the swift part of the current, the finest specimens are found in say 3 or 4 feet water on the edge or border of the stream and

are very hard to get with the roots &c.
which accounts for your finding
them generally without those appendages, I have never seen them
with those floating leaves, you
mentioned in your letter until
this summer, I send you a couple
of Spec^ns which I found close to the
shore and if they will suit you
I will try and send the number
you want in better flowering
condition &c—
I also send you a specimen
of Cuscuta, is it chlorocarpa? Engelm
coll. in Cumberland Co. N.J. Aug.
'66—

Yours truly

Dr. Engelmann

Dear Sir

Last week I sent
you a couple Specim.s of Juncus
bicrotonus from Station, Burlington
Co. N.J., did you get them?
I enclose a Specimen collected
near Camden, Camden Co. N.J.
where I found it very abundant,
there is no doubt but it is common
from Burlington to Cape May Cos.
Do you want any?

Yours truly
C. F. Parker

Dr. Geo. Engelmann

Dear Sir

I send you a small package of fungi, which I hope will be acceptable to you, I regret very much that I was unable to obtain f- orchidaceæ, for you this summer, the swamps were so high about the flowering time that the plants were under water some two or three weeks, turning them black so that they were unfit for collection. You will find in the bundle J. Aspen, Ed. from near Quaker Bridge, N.J- growing in "Wet Pyrola bogs," a very different kind of locality from Griffith's Swamp, where C.E. Smith, finds his plant- I also send a few specimens of J. Smithii Engelm. which I collected this summer on Broad Mt-

You wished me to send you specimen

MISSOURI BOTANICAL GARDEN

of J. dichotomus, which I have done from Burlington and Camden Co's, it appears to be a very abundant specie all through the middle and lower part of the state -

I send you some Isoetes, which I collected in company with A. H. Smith in the bed of Tom's River, Ocean Co. N.J. Sept. 16/67. I wish you would send me the name, Mr. C.E. Smith thinks it is Isoetes echinospora. I would state that it was growing along with Scirpus subterminalis, and very abundant - you will find a couple of Specimen of Lycopus Fusca, L - which is growing very abundant in wet ballast, Camden - Dr. Jos. Leidy found a few specimens in 1865 -

I was unable to find J. Roemerianus in the State, it must be a very rare plant, or we have overlooked it -

Yours truly C. F. Parker -
